DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Milz on August 14, 2006.

The application has been amended as follows:

Cancel claim 42.

Response to Amendment

This Office Action is in response to applicant's After Final amendment filed on August 1, 2006 and the above telephone interview. In view of applicant's amendment and cancellation of rejected or withdrawn claims, the case is in condition for allowance.

Drawings

New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because formal drawings are required now that the case is in condition for allowance. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Allowable Subject Matter

Claims 18-26, 36-38, 43-44, and 46 allowed.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Regarding independent claim 18, the prior art does not disclose or suggest a catheter with a plurality of sleeves that restrict port access as claimed.

Regarding independent claim 36, the prior art does not disclose or suggest a sphincterotome with a plurality of access ports in the arrangement as claimed.

Regarding independent claim 43, the prior art does not disclose or suggest a method of sliding a tube along a sphincterotome to allow access to a port as claimed.

Regarding independent claim 46, the prior art does not disclose or suggest a sphincterotome with a slidable tube for allowing and restricting access to at least one of a plurality of access ports as claimed.
